

MAP PROTRACTOR

Great for DF Triangulation!

Print this page on overhead transparency sheeting OR on regular paper and then photocopy onto transparencies. Cut out the protractor and use by lining up the zero degree line with a true North-South line. With the penalty of decreased accuracy, line up the 90-270 degree line with a line of latitude. You can also resize the graphic to match a convenient map scale.

This protractor shamelessly 'borrowed' from our ground-pounding friends at the US Army
